

Weekly Report for July 5th

Eric Davis

July 9, 2012

1 The Sites

So this week I started looking at the other sites data to be able to pinpoint and compare the imaging systems between them. The issue, however, is that what I thought was a fairly robust code is not handling the other sites data very well as seen in figure 1. Most of my week was spent trying to get a working code. I do have a couple ideas I think should be able to get it working.

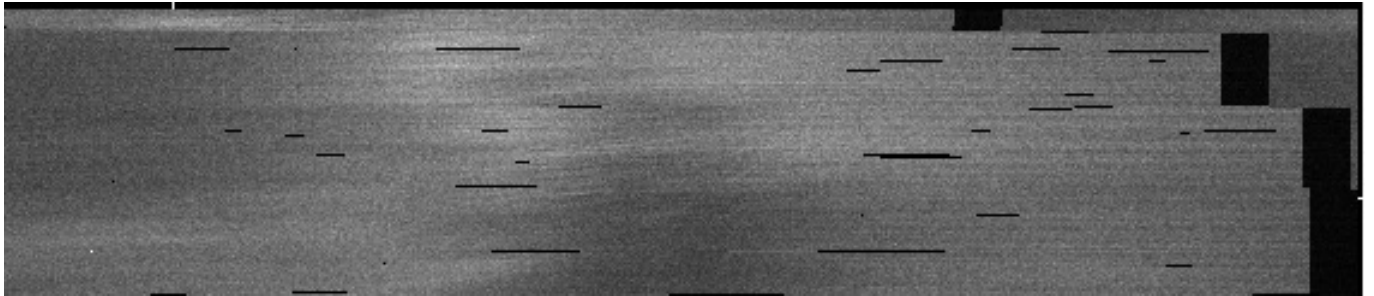

Figure 1: This data is from the Gillam Manitoba sight. As seen the camera skips steps sporadically, with the black lines indicating missing data. I should hopefully have a code that can handle files like this or any other data issues by the end of Monday.

2 Future Considerations

I plan to continue with the goals outlined in the "Different Site Outline" document. I am still on schedule and will keep you informed if I have any roadblocks I could use help with.
